

## CLINICAL

### **BD FACSVia™**

You get the performance of a full-function clinical flow cytometer in a space-saving, powerful, easy-to-use benchtop system designed to ensure that your laboratory runs smoothly and efficiently.

The BD FACSVia system provides accuracy, repeatability, and ease-of-use, along with low cost of operation, from a system that combines space-saving innovations in optics, fluidics, electronics, and miniaturization.

It easily fits on a benchtop and can be placed in a laminar flow hood to ensure biohazard containment requirements. The compact footprint delivers improved ergonomics for the health and safety of your staff.

The intuitive design of the BD FACSVia™ clinical software enables novice users to begin collecting and analyzing data in just a few hours, minimizing time and cost of training new staff members. Hands-on training with a BD FACSVia specialist ensures staff proficiency. Moreover, a comprehensive online Technical Resource repository provides 24/7 expert guidance to maximize your staff's productivity.

Designed to improve lab efficiency and reduce manual steps, the BD FACSVia with the BD Leucocount™ kit streamlines residual WBC counting. The BD FACSVia system helps you manage operational budgets while accurately and consistently enumerating residual leucocytes — ensuring blood product quality and protecting patient health by assuring that leucocytes have been removed from blood products.
